

SCHOOLS, COLLEGES, GREEN COMMUNITY SITES...

WE'VE GOT THE PERFECT WIND TURBINES FOR YOU

Our new 225kW and 750kW machines are a great match for 'Behind-the-Meter' or Net-Metering Applications in Suburban areas - and they're made in Massachusetts, USA!

If you are looking for wind turbines to fit on many public or urban/suburban properties look no further than the *Aeronautica/Norwin* line. Designed specifically for mid-scale market applications, these machines deliver lots of power. And with their low profile, ultra-low noise signatures and highly efficient output, they provide the perfect balance

between economic output and acceptable size.

These turbines are perfect for many types of organizations, including schools and other municipal buildings, churches, farms, residential neighborhood clusters, commercial properties and more.

If you have the land but don't have the funding, you'll appreciate that these machines qualify for our *Aeronautica*

Power Play® program. This program lets you - the landowner - obtain the benefits of sustainable wind generated power, without the investment required. If your site qualifies for our program, your organization receives an immediate reduce-

tion in electrical costs, and your electricity prices are fixed for many years into the future. You save money, your budgeting just got easier and more predictable, and the world gets greener. *Everyone wins.*

If you are a town administrator, consider *Aeronautica* Wind Turbines to create your own 'Power Authorities' for municipal uses. Many new net-metering rules will allow you to generate power on one site, and credit the power to meters at other locations.

But whether you finance your own turbine project through bonding, or use the *Aeronautica Power Play*® program, you get the satisfaction of knowing that your organization is now contributing to the greening of America and the strengthening our local and national economies by lessening our dependence on foreign oil.

For full program details, call us today at 800-360-0132, extension 80.
